

# Ventura River Continuous Monitoring Program

2013 - 2014 Summary

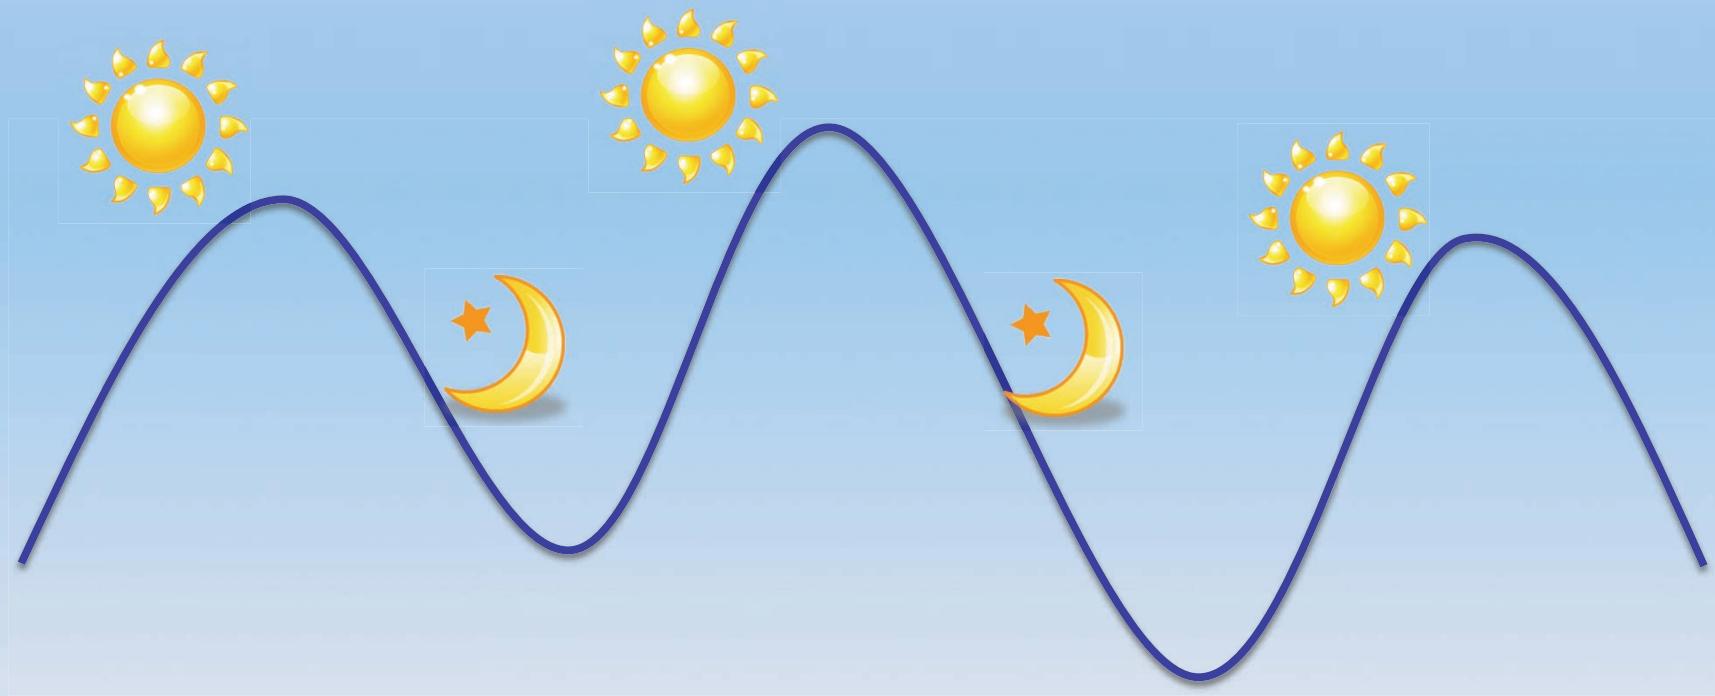

Ben Pitterle and Jenna Driscoll

From 2001 – 2008 Ventura Stream Team volunteers collected dissolved oxygen data between the hours of 9 am – 12 pm.

During this period no oxygen deficiencies (< 5 mg/l) were detected.

# Diurnal Dissolved Oxygen Fluctuations

# Volunteer Predawn Monitoring

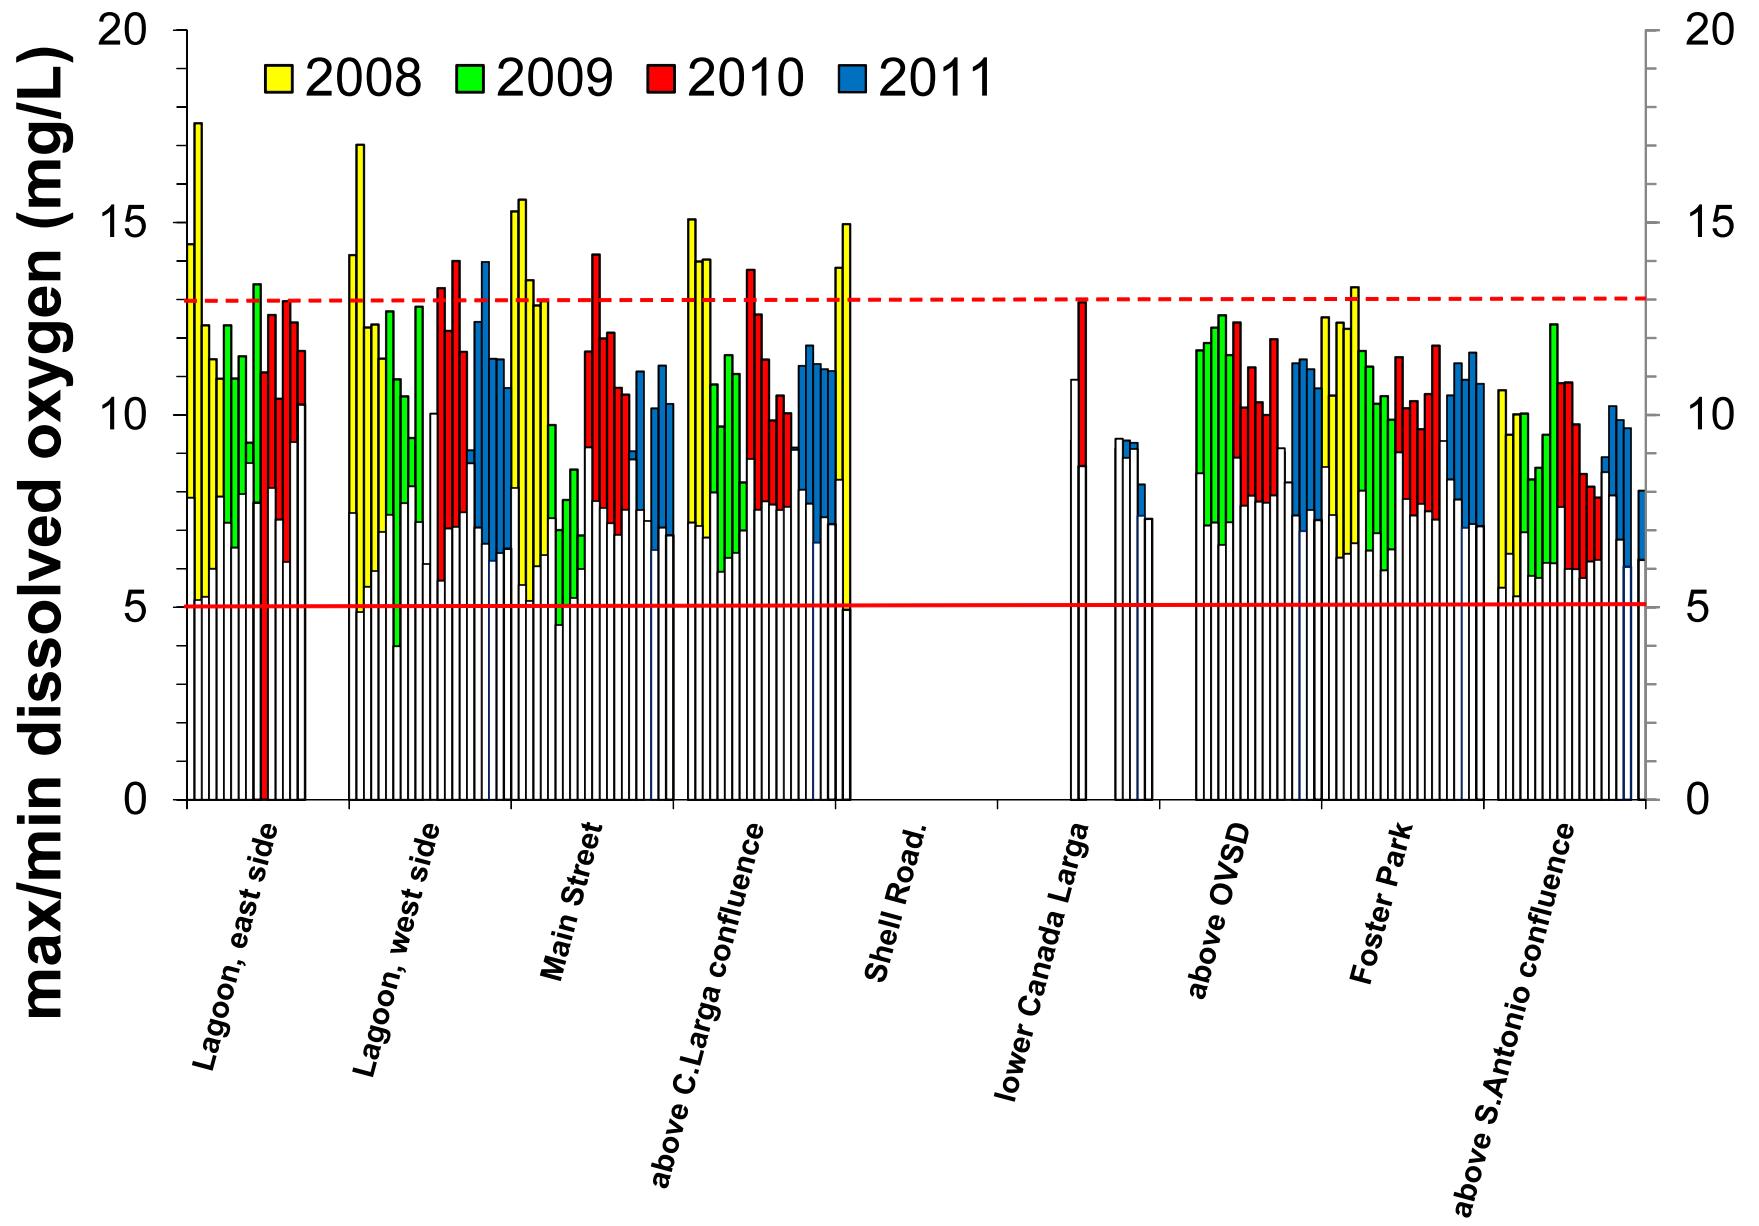

## 2008 - 2012

# Data Collection Procedure

- Dissolved oxygen sensors replaced prior to each season
- Dissolved oxygen logger pre-deployment calibrations performed
- Copper tape applied to minimize fouling
- Loggers housed in perforated PVC
- Mounted to 10 – 15 pound river rocks. Rocks placed with sensors positioned in flowing portion of river at each site. Pools and stagnant side-channels avoided. Co-located with pressure transducer and camera where possible.
- Sensors launched with 30 minute logging interval
- Data uploaded using portable shuttle device every 2 – 3 weeks
- Sensors cleaned of fouling and relaunched
- Disturbance minimized
- Calibration dissolved oxygen measurements collected on precise 30 minute interval each upload event

# Data Processing Procedure

- Data imported from shuttle using Onset Hoboware Software
- DO data processed to adjust for fouling using field calibration measurements and Hoboware Dissolved Oxygen Assistant
- Barometric compensation software applied to transducer data
- Corresponding depth data normalized for movement of rock (if any)

# Questions

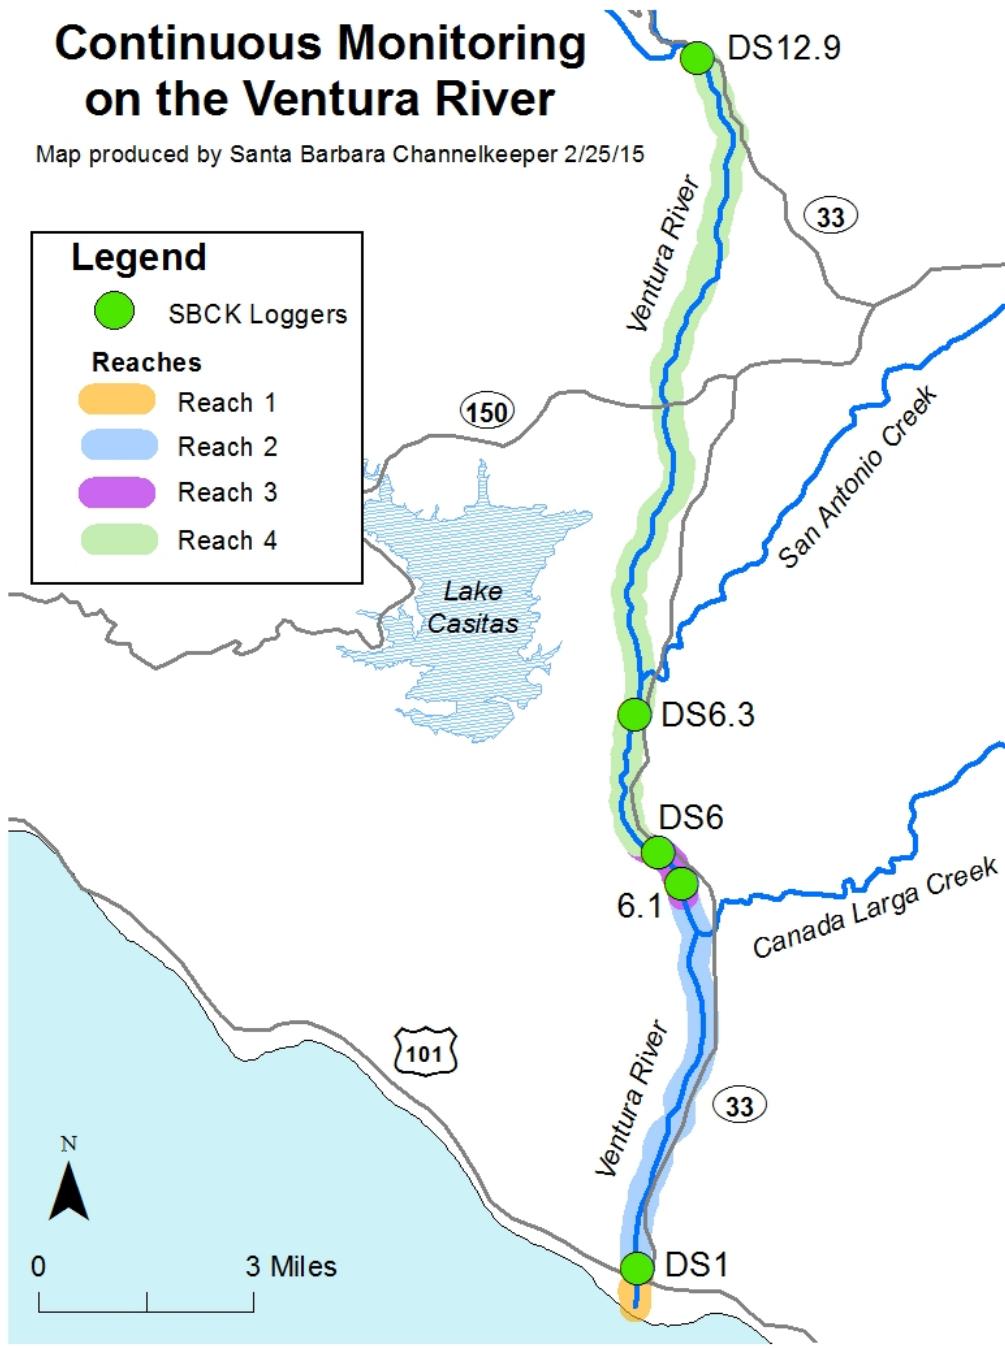

1. Are minimum dissolved oxygen concentrations falling below the 7 mg/l and 5 mg/l Water Quality Objectives
  
2. What are dissolved oxygen conditions of Reach 3 in 2013 and 2014.
  
3. Are irregular fluctuations in water depth occurring.

# Depth at Main St. vs above OVSD

# Conclusions

1. Are minimum dissolved oxygen concentrations falling below the 7 mg/l and 5 mg/l Water Quality Objectives

# Conclusions

1. Are minimum dissolved oxygen concentrations falling below the 7 mg/l and 5 mg/l Water Quality Objectives

Answer: Yes. DO consistently < 7 mg/l at all sites. DO consistently < 5 mg/l at all sites except 12.9 (Upper Reach 4).

# Conclusions

2. What are dissolved oxygen conditions of Reach 3 in 2013 and 2014.

# Conclusions

2. What are dissolved oxygen conditions of Reach 3 in 2013 and 2014.

Answer:

DO concentrations at Reach 3 sites consistently lower than other sites.

Both 7 mg/l and 5 mg/l WQOs consistently exceeded.

DO less than 2 mg/l measured at both sites

# Conclusions

3. Are irregular fluctuations in water depth occurring.

# Conclusions

3. Are irregular fluctuations in water depth occurring.

Answer:

Yes. River at Main Street consistently dewatered during early AM hours each day for extended periods.
